It is a rarely employed and actually works. Although 5-fluorouracil is the most common intralesional chemotherapeutic option for BCC and SCC, many other agents have been shown to be as effective. They include bleomycin and various interferon subgroups. For squamous cell carcinomas, intralesional methotrexate has also been shown to be effective.

5-FU (5-fluorouracil) is a highly effective and well-tolerated treatment used for superficial squamous cell carcinomas and squamous cell carcinomas in-situ. Imiquimod has been the mainstay for topical treatment of superficial basal cell carcinomas. However, when some patients fail to mount a response with application of imiquimod, 5-FU becomes an excellent option for topical treatment for basal cell carcinomas. This patient illustrates this scenario.

SCOTTSDALE, ARIZ. — Although 5% 5-fluorouracil cream received Food and Drug Administration approval for treatment of superficial basal cell carcinoma nearly 4 decades ago, the cream is underused for that indication today, even though it is very well tolerated and is particularly beneficial as an alternative to surgery for many patients, Leon H. Kirck, M.D., said at a meeting sponsored by the Skin Disease Education Foundation.

5-fluorouracil (5-FU): The drug most often used in topical treatment of actinic keratoses, as well as some basal and squamous cell skin cancers, is 5-FU (with brand names such as Efudex, Carac, and Fluoroplex). It is typically applied to the skin once or twice a day for several weeks. When put directly on the skin, 5-FU kills tumor cells on or near the skin 's surface, but it can 't reach cancer cells deeper in the skin or those that have spread to other organs.

Basal cell carcinomas (BCCs) are locally destructive malignancies of the skin. They are the most common type of cancer in the western world. The lifetime incidence may be up to 39%. UV exposure is the most common risk factor. The majority of these tumours occur on the head and neck. Despite BCCs being relatively indolent the high incidence means that their treatment now contributes a ...
