5 and ASP.NET Core | Toptal
Using ASP.NET Core to serve the Angular application It can be argued that serving an Angular application “within” ASP.NET Core is wasteful in terms of resources. In the end the Angular application is just a set of static files, there’s no need to have the request for those files go through the ASP.NET Core middleware pipeline.

Before testing this operation, we have to do a few more things in ASP.NET Core Web API. Enable CORS in Asp.Net Core API : .Net Core Web API will block request from another application which is hosted in another domain or in another port number. by default, Angular is running at port number 4200 and Web API is hosted at a different port number. to make Http Request, we've to Enable-CORS (Cross Origin Resource Sharing) in Web API for the port 4200.

Single-Page Application (SPA) frameworks like Angular can be configured with ASP.NET Core to facilitate the development and publishing process. This is particularly useful when there is the need to serve the SPA from the .NET Core backend to allow the flexibility for server-side rendering or server-side prerendering.

How to Publish Angular with ASP.NET Core - Code Maze
The ASP.NET Core project provides an API back end and the Angular CLI project (contained within ClientApp) provides the front end /
