Division – When dividing by a complex number, multiply the top and bottom by the complex conjugate of the denominator. Then FOIL the top and the bottom and simplify. The answer should be written in standard form + .j) Example -

$$\frac{2 + j}{1 - j} \cdot \frac{1 + j}{1 + j} = \frac{(2 + j)(1 + j)}{(1 - j)(1 + j)} = \frac{2 + 2j + j + j^2}{1 - j^2} = \frac{2 + 3j - 1}{1 - (-1)} = \frac{1 + 3j}{2}$$
