Electron Probability Lab

Answers
Instead, the quantum-mechanical model for the atom gives the probabilities of finding an electron in a particular region around the nucleus. In this experiment, we model the probable locations of electrons around the nucleus. We will use dried beans or peas to represent the electrons to help us visualize the regions of low and

The position of an electron in an atom at a given moment cannot be predicted. The region of space in which the electron can probably be found is called an orbital. Orbitals are often referred to as “electron clouds” because they are not absolute. In fact, there are times when an electron may be found outside the orbital.

Electron Probability Lab

(d) If we count the number of dots in each spherical shell, we obtain the total probability of finding the electron at a given value of r . Because the surface area of each shell increases more rapidly with increasing r than the electron probability density decreases, a plot of electron probability versus r (the radial probability)
