The injection molding has seen steady growth since its beginnings in the late 1800's. The technique has evolved from the production of the simple things like combs and buttons to major consumer, industrial, medical, and aerospace products. The invention of an injection molding machine was achieved by John Wesley who injected hot

## *Simulation and Design of a plastic injection Mold*

When an injection mold designer is approached to build a mold for plastic components, there are many critical design considerations for different types of injection molds, regardless of the industry. Plastic injection molding is the manufacturing process of choice for engineers seeking plastic parts for their products ranging from toys and combs to high-precision molded parts required in several different industries.

## *Injection Mold Design Engineering Considerations*

In the manufacture of injection mold, mold base is an integral part, mold maker can make your own mold base or buy a standard mold base, the system of the mold base can be adjusted with the construction standards required, both for the two plate and three plate, stripper plate ejectors, hot runner and mold base for a screw, when the entire standard mold base is not there to meet the new final step is to make a special mold base.
