Researchers in Leeds work on a wide variety of challenges in the areas of Topology, covering and extending a broad cross-section of the subject. The group's research in this area also interfaces with algebra, analysis, combinatorics, geometry, integrable systems, logic, physics and other disciplines. Specific topics include the following: Braid groups

Anatoly Fomenko - Wikipedia

Integrable systems is a branch of mathematics which first came to prominence in the mid 1960's with the (mathematical) discovery of the soliton by Kruskal and Zabusky while studying dispersive shallow water waves. Broadly speaking the focus is on systems for which - despite their nonlinear behaviour - exact solutions can be derived.
