~~Simple Scaling of Catastrophic Landslide Dynamics | Science~~

The term landslide refers to a rapid displacement of a mass of rock, residual soil, or sediments adjoining a slope, in which the center of gravity of the moving mass advances in a downward and outward direction. A similar movement proceeding at an imperceptible rate is called creep.

Read Free Landslide Science And Practice

The estimated volume of the landslide was 380,000 m³ and it moved at a speed of 10-15 m/s. The landslide happened at the high water level of 172.8 m (Xiao et al., 2015) and was triggered by reservoir impoundment. The landslide-generated impulse wave ran up to 13 m (Huang et al., 2012). However, the incident caused no casualties, because no ...
