Moral A PDE has arbitrary functions in its solution. In these  
examples the arbitrary functions are functions of one variable that  
combine to produce a function  $u(x,y)$  of two variables which is only  
partly arbitrary. A function of two variables  
contains immensely more information than a function of only one  
variable.

Ordinary and partial differential equations occur in many applications. An ordinary differential equation is a special case of a partial differential equation but the behaviour of solutions is quite different in general. It is much more complicated in the case of partial differential equations caused by the

## ~~Partial Differential Equations~~

Partial Differential Equation (PDE for short) is an equation that contains the independent variables  $q, \dots, X_n$ , the dependent variable or the unknown function  $u$  and its partial derivatives up to some order. It has the form where  $F$  is a given function and  $u_{X_j} = \partial u / \partial X_j$ ,  $u_{X_i X_j} = \partial^2 u / \partial X_i \partial X_j$ ,  $i, j = 1, \dots, n$  are the partial derivatives of  $u$ .
