Introduction. Robust and Adaptive Control shows the reader how to produce consistent and accurate controllers that operate in the presence of uncertainties and unforeseen events. Driven by aerospace applications the focus of the book is primarily on continuous-dynamical systems. The text is a three-part treatment, beginning with robust and optimal linear control methods and moving on to a self-contained presentation of the design and analysis of model reference adaptive control

Generally, robust adaptive control methods , , have gained more attention recently due to their agility and robustness. However, most of these papers employ model-based method; therefore, the plant should be modeled comprehensively which is usually a delicate task, particularly, when the plant is a robot with non-linear equations.

A robust adaptive variable structure output feedback controller to stabilize uncertain dynamics system with explicitly considering nonlinearity/dead-zone control in control input has been proposed. It is shown that the designed controller guarantees the global reaching condition of the sliding mode for the uncertain system.

Robust Adaptive Control of Feedback Linearizable MIMO Nonlinear Systems With Prescribed Performance. Abstract: A novel robust adaptive controller for multi-input multi-output (MIMO) feedback linearizable nonlinear systems possessing unknown nonlinearities, capable of guaranteeing a prescribed performance, is developed in this paper. By prescribed performance we mean that the tracking error should converge to an

Robust Adaptive Control of Feedback Linearizable MIMO ...

Adaptive control is different from robust control in that it does not need a priori information about the bounds on these uncertain or time-varying parameters; robust control guarantees that if the changes are within given bounds the control law need not be changed, while adaptive control is concerned with control law changing itself.
