Solar intertie photovoltaic (PV) systems are not particularly complex. First there are panels, which collect the sunlight and turn it into electricity. The DC signals are fed into an inverter, which converts the DC into grid-compatible AC power (which is what you use in your home). Various switch boxes are included for safety reasons, and the whole thing is connected via wires and conduit.

Solar cells are small devices which can convert sunlight into electricity. One cell on its own will only provide a very small amount of power. Several cells connected together and fixed in a frame make a solar panel (or a module), which can produce a larger, useful amount of power. When several panels are connected together you have a solar array.
