In this section, we will cover one of the first published uses of randomization in algorithms: Freivald's algorithm (1977). Simple and elegant, the algorithm verifies the product of square matrices, given a candidate for the solution. More precisely, given  $(n \times n)$  matrices  $A$ ,  $B$ , and  $C$  over a field  $F$ , we must decide whether the equation  $AB = C$  holds.
