## **The Integumentary System - Holly H. Nash-Rule, PhD**

Describe two integumentary  
system mechanisms that help  
in regulating body  
temperature: 1. When  
capillary blood flow to the  
skin is enhanced by nervous  
system controls, heat  
radiates from the skin  
surface; restriction of  
blood flow conserves body  
heat.

The integumentary system refers to the skin and its accessory structures, and it is responsible for much more than simply lending to your outward appearance. In the adult human body, the skin makes up about 16 percent of body weight and covers an area of 1.5 to 2 m<sup>2</sup>. In fact, the skin and accessory structures are the largest organ system in ...

## Exercise 6 Answer Key

### **The Integumentary System | Anatomy and Physiology I**

The skin and its accessory structures make up the integumentary system, which provides the body with overall protection. The skin is made of multiple layers of cells and tissues, which are held to underlying structures by connective tissue (Figure 4.1). The deeper layer of skin is well vascularized (has numerous blood vessels).
