What are Tropical Diseases? - Medical News

Mosquitoes and other biting insects transmit many of the most important, devastating and neglected human infectious diseases, including malaria, dengue fever, chikungunya and West Nile virus. Economic development and cooler temperatures have largely kept mosquito-borne diseases out of wealthier Northern Hemisphere countries, but climate change promises to tip the scales in the other direction.

How does climate change affect disease?

The burden of these diseases is highest in tropical and subtropical areas, and they disproportionately affect the poorest populations. Since 2014, major outbreaks of dengue, malaria, chikungunya, yellow fever and Zika have afflicted populations, claimed lives, and overwhelmed health systems in many countries.

Vector-borne diseases

Otherwise please ask your GP to refer them to our UCLH Paediatric Infectious Diseases/Tropical team. We are the national clinical referral centre for patients with infectious and tropical diseases. Types of Fungal Diseases | Fungal Diseases | CDC

Panama disease (or Fusarium wilt) is a plant disease that infects banana plants (Musa spp.). It is a wilting disease caused by the fungus Fusarium oxysporum f. sp. cubense.The pathogen is resistant to fungicides and its control is limited to phytosanitary measures.. During the 1950s, an outbreak of Panama disease almost wiped out the commercial Gros Michel banana production.
